(57)Abstract:

PURPOSE: To make the tenderer card at a low cost, and also, in small and thin size without complicating a structure of a bid acceding machine, and moreover, to improve its durability.

CONSTITUTION: The tenderer card is provided with three discriminating wiring circuits 14a, 14b and 14c provided in accordance with three sets of auction operating devices, respectively, and connected to a connecting terminal of a bid acceding machine K, and each discriminating wiring circuit thereof 14a-14c consists of a wiring train 16 provided with patterns 15 being plural switches which are connected in parallel, connected to an output terminal side of the bid acceding machine K and can be connected or disconnected, and common input lines 17 of plural patterns 15 connected to an input terminal side of the bid acceding machine K. Also, by combination of connection and disconnection of this pattern 15, it becomes a tenderer's discrimination code. In such a state, when this tenderer card C is inserted into the bid acceding machine K, the wiring train 16 is scanned by a scanning signal of the auction operating device S, and the discrimination code is read.
